

## Linde Forklift Parts

Linde Material Handling is one of the largest manufacturing companies in the world specializing in forklifts and warehouse equipment. For over five decades, the firm has been raising the bar for driver assistance systems, fleet management, industrial trucks and high performance material flow solutions. Linde has developed a unique set of equipment designed to take care of individual buyer necessities.

As one of the world leaders in manufacturing warehouse equipment and forklifts, the firm operates in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the second biggest manufacturer of industrial trucks across the globe.

Operating in over one hundred countries around the world with its' own branches, Linde is widely recognized within the industry. There are assembly and production facilities in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales vendors. The company's fleet is very impressive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde builds the fleet and their vehicles specifically tailored to their customers needs.

Linde also creates high-performance options for intralogistics with warehouse equipment, electric and diesel forklift trucks, automation solutions, fleet management solutions, financing options and driver assistance systems. The company offers complete operator certification and forklift services.

There have been big advancements in automation, digital networking and the demand for more specific products across numerous industries; contributing influences that are driving technological advancement within the intralogistics realm. Linde Material Handling strives to help its' clients meet and exceed their material management issues. Client care is paramount at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they provide its' customers with a sustainable benefit.
