

Fantuzzi Parts

The Fantuzzi Company offers an abundance of material handling equipment and heavy machinery. The fleet consists of a number of equipment dedicated to transporting, loading and unloading goods. The railway freight sector and the port authority require a large portion of their equipment.

Initially beginning in the 1960s as a zoo-technical and agricultural equipment manufacturer in the province of Reggio Emilia, Fantuzzi has expanded to become a global leader in the heavy equipment industry. Now a multinational firm, the company gradually expanded after introducing successful advancements and overcoming a large number of technological challenges. Luciano Fantuzzi is the President and founder of the group. In 1967, the group started making side lift trucks specifically for transporting timber and extended materials such as metal rods that weighed between three to five tonnes. The company enjoyed frequent orders and completed sixty units in the second year; which was 5 times greater than their 1st year sales.

Within a short time, the company took off exponentially. In 1968, a heavy-duty side-loader British model that was capable of lifting up to 32 tonnes inspired Luciano Fantuzzi. He wanted to create something that had more power with a similar style. After completing this machine and attaining his goal, Luciano began receiving orders from French Railways, Fiat and many others. Nowadays, the Fantuzzi Group Italy has numerous manufacturing plants around the globe including Italy, Germany and China. The company proudly exports to 162 countries.

Fantuzzi has kindly offered its patented knowledge with governments all around the globe with the goal of making the material handling, heavy equipment and transportation industries more convenient. Advancements and digital technology are serving to revolutionize the industry.
